

Subsea Solutions ·

CAMPAIGN LAUNCH · WEEK 1

A deeper standard for subsea integrity.

Over the next 12 weeks we'll publish what we believe operators should expect from every IRM contractor. Follow along — and tell us where we're wrong.

POST COPY · 320 CHAR

"The same five vendors. The same five decks. Operators deserve a clearer way to compare us. Over the next 12 weeks we're publishing what we believe the IRM standard should be — and inviting the industry to push back. Follow #DeeperStandard. Tell us where we get it wrong."

Subsea Solutions ·

MOBILISATION STANDARD

48hrs

FROM PO TO VESSEL DECK

If your IRM vendor can't mobilise in 48 hours, an anomaly becomes a shutdown.

#DeeperStandard · 02 / 12

POST COPY · STAT-LED

"48 hours. That's the operational standard we measure ourselves against from purchase order to crew on deck. Most shutdowns we've seen could have been prevented by speed of response, not better hardware. Where's the bottleneck in your current contract? ↓"

Subsea Solutions

If the only differentiator on the page is a logo wall, it's not a capability statement — it's a brochure.

Operations team

On what makes an IRM proposal credible

POST COPY · POINT OF VIEW

"Half the IRM capability statements we see in the market are interchangeable. Same logos, same certifications, same fleet shots. What we look for when we evaluate a partner: documented response times, named project leads, the last three anomalies they reported. That's the bar."

Subsea Solutions ·

CASE · TIMOR SEA FPSO

Riser anomaly closed out in one campaign — zero LTI, zero scope creep.

LTI · SCOPE CREEP

Inspection campaign delivered on the original SOW with full anomaly report inside contractual window. Read the full case study →

POST COPY · CASE STUDY

"Anomaly reported on a riser segment off the Timor Sea. Eleven days later — campaign closed, full anomaly report delivered, zero scope creep, zero lost-time incidents. We're publishing the redacted case study this week. Comment 'CASE' if you want a copy emailed."
